

Locate your Sole-Mate

1. Take the last four digits of your zip code and write them down on a piece of paper.
2. Scramble these four digits to create a new **DIFFERENT** 4 digit number
3. **Subtract** the **smaller** number from the **larger** number.
4. Add the digits of your answer together to obtain a total. If that number has more than one digit add the digits of that number together. Keep doing this until you get a single number. You can now locate your sole-mate.
- 5 Start counting clockwise from Idaho (Idaho = 1, Washington = 2, Oregon = 3, etc.)
When you get to the number that matches the location code you will know the state where your sole-mate lives.
