

Mathematical Puns

1. Mathematics teachers call retirement 'the aftermath'.
2. Deaf mathematicians communicate through sine language.
3. Mathematics teachers call retirement 'the aftermath'.
4. The marine biology student took a math course called algae-bra.
5. Some mathematicians are reluctant to cosine a loan.
6. I was kicked out of math class for one too many infractions.
7. He wears glasses during math because it improves division.
8. I used to hate math but then I realised decimals have a point.
9. I didn't understand the math problem, so the teacher summed it up for me.
10. What do organic mathematicians throw into their fireplaces? Natural Logs.
11. We'll never run out of math teachers because they always multiply.
12. Mathematicians are sum worshippers.
13. I strongly dislike the subject of math, however I am partial to fractions.
14. You know what happens after you miss math class? It starts adding up.
15. I've failed the mathematics test so many times I lost count.
16. The mathematician worked at home because he only functioned in his domain.
17. The math teacher was a good dancer - he had algorithm.
18. Graphing rational functions is a pain in the asymptote.
19. I'm bad at math, so the expression $2n + 2n$ is $4n$ to me.
20. The best place for a mathematician is behind a counter.
21. A math professor in an unheated room is cold and calculating.
22. Life without Geometry is pointless.
23. For a good prime, call 555-7523 (and yes, it IS a prime number).
24. Mr. P's blood type is B+ (the same as his philosophy of life).
25. A right triangle is never wrong.
26. The math teacher was hungry, but all she had to eat was a piece of pi.
27. Old math teachers never die, they just become irrational.
28. With negative numbers, some math students become nonplussed.
29. An abacus is one tool that you can always count on.
30. We'll never run out of math teachers because they always multiply.
31. Old math professors never die, they just reduce their functions.
32. Every time I see an opportunity to make a math joke the conversation goes off on a tangent.

33. lawyer was defending a math teacher. He had to sum up.
34. An abacus is one tool that you can always count on.
35. Math teachers can tell the difference even and odd numbers because they can differentiate.
36. Two mathematicians arguing about even numbers were at odds.
37. An abacus is one tool that you can always count on.
38. The Lipton Company is big on statistics -- especially t-tests.
39. It is impossible to have a rational conversation with a man who doesn't know his asymptote from a hole in the graph!
40. A hungry clock goes back four seconds.
